**Additional Counter Reply Affidavit on behalf of Union of India,
in pursuance to the direction of this Hon'ble Court dated 12/11/2020 and
memo dated 25/11/2020, filed by petitioner.**

....

I, R.Venkatesh, son of late K.Ramachander, aged about 58 years, resident of Bengaluru, do hereby solemnly affirm and state on oath as follows;

1. I state that, I am working as Scientist-G/Deputy Director General and Head of Office, in the office of respondent No.7, Karnataka Unit. I am authorized to swear this affidavit on behalf of Union of India. I am acquainted with the facts of the case.

2. I state that, with regard to, point No.1 i.e. what kind of data becomes available to the Government only by an act of an individual downloading the Aarogya Setu application?, it is submitted that, when a user downloads the app, no data is shared. When a user registers the app, he/she is requested to provide the following information i.e. name, phone number, age, sex, profession and countries visited in the last 30 days. The said inputs provided by the User are collected at the time of User registration, along with the location from where registration was done.

3. I state that, with regard to, point No.2 i.e. when a person who has downloaded the Aarogya Setu app conducts self-assessment test, whether the data entered while conducting the self-assessment test becomes available to the Government and other agencies?, it is submitted that, the self-assessment test contains a set of multiple choice questions i.e. Symptoms experienced by the User, History of any past or current Health conditions like Diabetes, Hypertension, Lung Disease, Heart Disease, Kidney disorder, Whether the User has undertaken

आर. वेंकटेश
R. Venkatesh
उप महा निदेशक
Deputy Director General
NIC (MeitY)
Government of India

International Travel during the past 28-45 days, whether the User has interacted or lived with someone who has tested positive for COVID-19 or if the User is a healthcare worker, who has examined COVID-19 confirmed cases without protective gear. The response given by the User for the above mentioned questions are recorded, along with the location from where the self-assessment test was undertaken. The self-assessment test, created in consultation with ICMR, evaluates the likelihood of COVID-19 infection based on the User's self-reported symptoms and other relevant information like diseases declared, age and gender. This evaluation takes place on the App and the results are communicated to the User immediately in terms of green, yellow or orange colors.

4.   I state that, with regard to, point No.3 i.e. when an individual downloads the Aarogya Setu app and activates Bluetooth, what kind of personal data in respect of that person becomes available to the Government and other agencies?; it is submitted that, when a user downloads the app, no data is shared. When a user registers the app, he/she is requested to provide the following information i.e. name, phone number, age, sex, profession and countries visited in the last 30 days. The inputs provided by the user of the above mentioned parameters are collected at the time of user registration, along with the location from where registration was done. Bluetooth is used for contact tracing. By default, the contact tracing and location information that is collected, is stored locally on the user's mobile device. This information is only uploaded to the Aarogya setu server, ONLY if the user tests positive for COVID-19. The location information is also recorded when the user takes the self-assessment and it is sent to the server along with the user's response to self-assessment.

5.   I state that, with regard to, point No.4 i.e. whether it is mandatory for a person who download the Aarogya Setu app to subject himself to self-assessment test?, it is submitted that, the self-assessment test is voluntary.

6.   I state that, with regard to, point No.5 i.e. whether on downloading the Aarogya Setu app, Bluetooth automatically becomes activated? It is submitted that, it is not automatically activated. Bluetooth is activated only after obtaining consent of the User at the time of launching the App.

आर. वेंकटेश
R. Venkatesh
उप महा निर्देशक
Deputy Director General

7. I state that, with regard to, point No.6 i.e. what is the concept of response data referred in the Government order dated 11th May 2020?, it is submitted that, "Response Data" as defined in the Aarogya Setu 'Data Access and knowledge Sharing Protocol, 2020, is as follows: "The demographic data, contact data, self-assessment data and location data are collectively called as 'response data'. Here, demographic data means the name, mobile number, age, gender, profession and travel history of an individual. Contact data means data about any other individual that a given individual has come in close proximity with, including the duration of the contact, the proximate distance between the individuals and the geographical location at which the contact occurred. Self-assessment data means the responses provided by that individual to the self-assessment test administered within the Aarogya Setu app. Location data means data about the geographical position of an individual in latitude and longitude."

8. I state that, with regard to, point No.7 i.e. under which contingencies, the status of a person who has downloaded Aarogya Setu app is shown as either red or orange and in which cases, yellow and green colors are displayed?, it is submitted that, **the status turns 'red'**, when the user is COVID-19 positive and he/she must Contact 1075 immediately for further advice, from medical experts; **the status turns 'orange'** when, the user has indicated COVID-19 symptoms during self-assessment and/or the user recently met any COVID-19 positive person or came in close contact and in close proximity and for a significant period of time, thus, Self-Quarantine and isolation is must. If symptoms persist, then Testing is recommended along with use of masks, practice handwashing and social distancing; **the status turns 'yellow'**, when the user has met someone who tested COVID-19 positive but the interaction was limited and socially distant and/or the user has indicated one or more COVID-19 symptoms during Self-Assessment, he/she is supposed to Self-Quarantine, isolation is must and to Keep monitoring symptoms, use masks, practice handwashing and social distancing; the **status turns 'dark green' when,** the user has declared a mild COVID-19 symptom during self-assessment or has come in contact with a COVID-19 positive person, but at a relatively long distance or for a short duration and thus he/she is supposed to keep monitoring symptoms. Self-Quarantine is advisable along with Use of masks, practice handwashing and social distancing and the status turns

Venkatesh
Deputy Director General

'light green', when, the user haven't met any COVID-19 positive person, or haven't declared any COVID-19 symptoms during Self-Assessment, or haven't taken the self-assessment yet and thus he/she is supposed to Keep monitoring for symptoms, use masks, practice handwashing and social distancing. The said contingencies are annexed hereto as **Annexure R1.**

9. I state that, the procedure from the beginning i.e. from when the user installs the Aarogya setu app and until the user is directed to the Home Page of the app; the steps are explained as follows;

Step 1: To open Aarogya setu app in the play-store. The screenshot of the step is annexed hereto as **Annexure-R2.**

Step 2: To Click on the Install Button and Install the App. The screenshot of the step is annexed hereto as **Annexure-R3.**

Step 3: Once installation is completed, click on 'Open' button to open the app. The screenshot of the step is annexed hereto as **Annexure-R4.**

Step 4: App will launch and the user will be provided with options to choose the language at his/her comfort. The screenshot of the step is annexed hereto as **Annexure-R5.**

Step 5: The page asking 'would you like to be kept informed, if you have crossed paths with someone who has tested COVID-19 positive?' with a 'Next' button will appear. The user is supposed to click the 'Next' button. The screenshot of the step is annexed hereto as **Annexure-R6.**

Step 6: Once the user clicks 'Next' button in step 5, the user will be directed to the page, where the user is informed on how the Aarogya setu app works by switching on the Bluetooth and Location feature on the mobile phone and asks to switch on the same which can be switched off once the registration procedure is completed. The page also contains the 'Next' button, which once clicked the user will directed further. The screenshot of the step is annexed hereto as **Annexure-R7.**

Step 7: Once the user clicks the 'Next' button in step 6, then the user is informed about the Alerting feature (in case the user has

R. Venkatesh
उप महा निदेशक
Deputy Director General
NIC (MeitY)

come in close proximity to an Individual who has tested positive for COVID-19). The page contains the 'Next' button, which once clicked the user will directed further. The screenshot of the step is annexed hereto as **Annexure-R8**.

Step 8:   Once the user clicks 'Next' button in step 7, then the user will be directed to the page, with a button 'Register Now', which once clicked, the registration procedure will begin. The screenshot of the step is annexed hereto as **Annexure-R9**.

Step 9:   Once the user clicks on 'register now' button in step 8, then the user will be directed to the page that contains the Device Location, Bluetooth and Data Sharing features of the App. Links to the detailed 'terms of service' and 'privacy policy' will be provided, which the user can access by clicking on the link and once the user is satisfied with the 'terms of service' and 'privacy policy', then they can provide their consent by clicking on the 'I Agree' Button. If the user doesn't agree then the user can simply close the app. The screenshot of the step is annexed hereto as **Annexure-R10**.

Step 10:   As the user clicks on 'I Agree' button in step 9, then the user receives a pop-up, asking for consent to allow location access permission, with the following choices i.e. i. Allow all the time, ii. Allow only while using the app and iii. Deny. The user can choose any of the options provided at his/her comfort. The screenshot of the step is annexed hereto as **Annexure-R11**.

Step 11:   If the user has provided the location access permission in step 10, and if the phone's location service is not enabled, then the user will receive a pop-up, to 'Turn On' the location service. The user can choose to turn or discard the pop-up. The screenshot of the step is annexed hereto as **Annexure-R12**.

Step 12:   In the next step, the user will receive a pop-up, to either allow or deny the permission to allow Bluetooth access for Aarogya setu app and make the device visible to other Bluetooth device for just 120 seconds, so that the health status of the user and people around him/her using the Aarogya setu app

R. Venkatesh

Deputy Director General

can be assessed and the same can be updated to the user of the app about any person who has tested positive or with any mild symptoms in and around the user. The screenshot of the step is annexed hereto as **Annexure-R13**.

Step 13: If the user allows the Bluetooth permission, then in the next step, the user would be requested to provide his/her mobile number. The user can provide the mobile number and click 'submit' button or click on the option i.e. 'why is it needed?' to know more details on why Aarogya setu app requires the user's mobile number. The screenshot of the step is annexed hereto as **Annexure-R14**.

Step 14: Once the user clicks on the option i.e. 'why is it needed?', he/she will be directed to the page, which explains the reason for the requirement of mobile number i.e. "Say you met someone a week back at a gathering or were in close proximity of someone unknown at a public place, and in a few days, they test positive for COVID-19. The Government of India will track back all touch points of that person, through the active devices with the app installed, that were in close radius of that person, in the past 14 days. A notification will then be sent to all such contacts with an advisory on further course of action, to self-isolate or to get the test done at a nearest testing center as needed. By participating in active contact tracing, you will help us minimize the spread of COVID-19 and enable Government of India to implement proactive measures for your health and well-being". Once read, the user has to click on the 'I Understand' Button, to proceed further. The screenshot of the step is annexed hereto as **Annexure-R15**.

Step 15: Once the user clicks on 'I understand' button, in step 14, the OTP (One time password) will be sent to the User's Mobile Number which the user provided in step 13. Once received, the same must be entered and 'Submit' button needs to be clicked. The screenshot of the step is annexed hereto as **Annexure-R16**.

आर. वेंकटेश
R. Venkatesh
उप महा निदेशक
Deputy Director General
NIC (MeitY)
Government of India

Step 16: Once the correct OTP is submitted in step 15, the user will be directed further to the page, wherein the details i.e. gender, full name, age, profession, countries travelled outside in last 30 days, Ready to volunteer in the time of need?, Confirm submission and are you feeling well? Will be asked. The user is supposed to provide with the respective details. Once done, the option to take 20 seconds self-assessment test will be asked, which the user can either accept, deny or assess later. The screenshot of the step is annexed hereto as **Annexure-R17**.

Step 17: If the user provides consent to take the self-assessment test, in the previous step, then the user would be directed to the self-assessment test page, where the page requests the user to provide right/accurate answers, since the Medical and Support Staff are valuable and very limited in number. The screenshot of the step is annexed hereto as **Annexure-R18**.

Step 18: If the user doesn't provide consent for self-assessment in step 16 or even if the user completes the self-assessment test, the user will be directed to the Home Page of the App. The screenshot of the step is annexed hereto as **Annexure-R19**.

10. I state that, in regard to the memo filed by petitioner on 25/11/2020, the contents in paragraph Nos'.1 to 5 is not completely accurate. The Aarogya Setu App may be downloaded from Play store, App store and Amazon web service. They are the service providers for downloading Aarogya Setu App. No data would be collected by them. Further, Annexures-2, 3 and 4 do not disclose the complete process of downloading/installing Aarogya Setu App etc, which has been dealt in the preceding paragraph of this reply affidavit.

11. I state that, annexure-6, produced by petitioner in the memo dated 25/11/2020, which is an article under the caption "A Survey of COVID-19 Contact Tracing Apps" said to have been published by the Institute of Electronics, Electrical Engineers; it is submitted that; the said article compares different architectures used in contract Tracing Apps like Centralized, De-centralized and Hybrid. The opinions provided in the

आर. वेंकटेश
R. Venkatesh
उप महा निदेशक
Deputy Director General
NIC (MeitY)
Government of India

article are based on these three architectures and are not specific Aarogya setu App. Moreover, Aaroya setu App employs a Hybri approach, where the contact tracing is done and stored at the user device locally. The contract tracing information is sent to and stored at th user's device locally. The contract tracing information is sent to the serve if the user tests positive for COVID-19. The authors of the article have no officially consulted Government of India, for a purpose of understandin the facts, working and reasoning of the Aarogya Setu App. The sai Article makes the following observations at page-35 and 36 as a part o their conclusion that;

a. The contract tracing apps are likely to play a vital role in aiding health authorities quickly identify individuals that may have been exposed to the virus. The imminent interest and adoption of tracing app technology will improve the tracing capability of health authorities."

b. Government agencies and service providers such as ISPs, and large corporations such as Apple/Google can track people by using traditional apps and navigation apps and a whole range of cameras deployed across cities. Since, many users already install a myriad of apps on their phones or smart watches (game, social media, etc.) without knowing the security/privacy implication, installing a tracing app that primarily aims at helping in a noble cause of keeping the community safe from spreading the COVID-19 disease, in the opinion of the authors, should not cause undue concern.

12. I state that, Privacy and security measures in Aarogya Setu App has been developed with "privacy-first by design" as a key principle. Aarogya Setu App has implemented some of the best and widely accepted privacy features and practices, including anonymization, data minimization, purpose and use limitation and data retention principles. The four key ways in which Arogya Setu App protects the privacy of its users are:

a. Personal information provided by the user at the time of registration is immediately anonymized and all subsequent transactions are related to a Device Identification Number (DiD) that is assigned to the User by the Aarogya Setu Sever.

आर. वेंकटेश
R. Venkatesh
उप महा निर्देशक
Deputy Director General
NIC (MeitY)
Government of India
Bengaluru

b. By default, all contact tracing and location information that is collected, is stored locally on the User's mobile device. This information is only uploaded to the Aarogya Setu Server, if the user tests positive for COVID-19.

c. All contact tracing and location information stored on the mobile device and not uploaded to the Aarogya setu servers, is permanently deleted from the phone on a rolling 30-days cycle. All the contact tracing and location information that might have been uploaded to Aarogya setu server is permanently deleted for 45 days from the date of upload, if the user has not tested positive for COVID-19, within that period of time. If the user test positive for COVD-19, all contact tracing and location information pertaining to the user is permanently deleted from the server 60 days after the user declared cured of COVID-19.

d. Further, the data collected is governed by the privacy policy and data access and Knowledge sharing protocol, which aids in maintaining transparency on what data can be collected, for what purpose and with whom it can be shared and for how long it can be retained.

13. I state that, on all information stored on the user's mobile device is protected using Advanced Encrypted Standard (AES) encryption. All the data stored on the device is AES encrypted, using the key chains of the operating system.

14. I state that, all data transmission from the device to serve and back is anonymised, encrypted and transmitted securely. Every single request from the app to the server is authenticated. The backend data storage at rest is also encrypted. The Aarogya setu team has done end-to-end testing of the system both internally and through reputed academic institutions/security audit org, to check for the presence of security vulnerabilities. A security audit is carried out before each updated build release of the App and only after obtaining proper audit clearance new version of the App is released for the general public.

Sworn on this the Ninth day of December, 2020 at Bengaluru.

×

Your mobile number is required for contact tracing.

Say, you met someone a week back at a gathering or were in close proximity of someone unknown at a public place, and in a few days, they test positive for COVID-19.

The Government of India will trace back all touch points of that person, through the active devices with the app installed that were in close radius of that person, in the past 14 days.

A notification will then be sent to all such contacts with an advisory on further course of action, to self-isolate or to get the test done at a nearest testing centre, as needed.
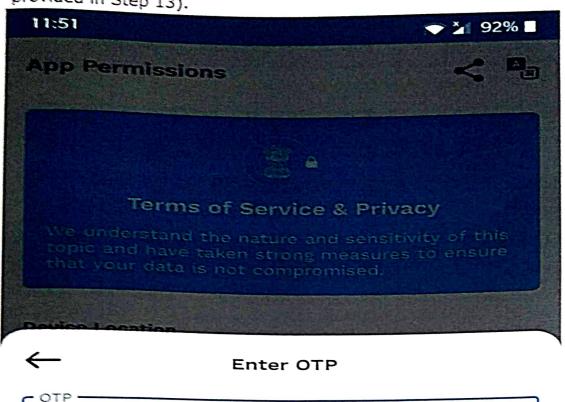

By participating in active contact tracing, you will help us minimise the spread of COVID-19 and enable Government of India to implement proactive measures for your health and well-being.
